Growth Equity-An unconstrained, all-capitalization investment strategy

December 31, 2022

Objectives

 Superior, long-term returns investing in primarily US-based companies with significant prospects for growth

Universe

- US equities:
 - Innovative companies that are both well managed and well positioned to leverage secular demand trends
 - Established companies as well as fast growing, young and dynamic businesses
- Broad definition of growth: revenue, cash flow and/or earnings
- No market capitalization or industry bias

Investment Strategy

- A growth equity strategy investing in liquid securities
- Focus on companies with well above average growth opportunities
- Long term (3-5 year) investment objective
- Commitment to portfolio and process transparency

NOTES ON PERFORMANCE INFORMATION

Princeton Capital Management LLC ("Princeton") is an independent investment management firm registered with the U.S. Securities and Exchange Commission.

Growth Equity Composite (inception date May 2009). A composite of separately managed model-based wrap accounts seeking superior, long-term returns over a market cycle versus the broad equity markets through a strategic equity investment approach that favors companies with significant prospects for revenue, cash flow and/or earnings growth, without limitations on market capitalization or industry participation.

The **S&P 500 Total Return Index** gauges the large-cap U.S. equity market. The **Russell 3000 Growth Total Return Index** is an unmanaged index that measures the performance of the broad growth segment of the US equity universe. These indices are unmanaged and include the reinvestment of dividends and earnings. Inclusion of index information is not intended to suggest that its performance is equivalent or similar to that of the historical investments whose returns are presented or that investment with our firm is an absolute alternative to investments in the index (if such investment were possible). Investors should be aware that the referenced benchmark funds may have a different composition, volatility, risk, investment philosophy, holding times, and/or other investment-related factors that may affect the benchmark funds' ultimate performance results. Therefore, an investor's individual results may vary significantly from the benchmark's performance.

Performance results are calculated internally using Orion Advisor portfolio accounting software. Performance prior to 2017 was calculated using Advent portfolio accounting software. Accounts are included in each composite and its performance at the beginning of the first full calendar month in which the account is fully reflective of the investment strategy. Composite and index performance reflects the inclusion of dividends, interest and other earnings. Valuations and returns are computed and stated in U.S. Dollars. All performance figures for periods one year and greater are annualized. Returns are weighted for the size of each underlying account. Pure gross returns are shown as supplemental information and are stated gross of all fees and transaction costs. Net returns are reduced by the highest wrap fee of 1.6% 1Q09-1Q10; 2.25% 2Q10-3Q18; 2.20% 4Q18-3Q19,1.5% 4Q19 to current. A client's return will be reduced by our advisory fees and other expenses a client may incur in the management of the client's portfolio. Our advisory fees are disclosed in our Form ADV 2A. Also, there is a compounding effect of advisory fees over time on the value of a client's portfolio. As an example, the deduction of investment management fees would reduce the annualized return for Core Equity for the five years ended December 2013 from 19.4% to 18.7%.

Performance results, and advisory fees, for individual client portfolios will vary due to the timing of investments, additions/withdrawals of funds, diversification guidelines, length of relationship, and size of positions, among other reasons. Past performance is not necessarily indicative of future returns and the value of investments and the income derived from them can go down as well as up. Future returns are not guaranteed and a loss of principal may occur.
